ABOUT ME

Greetings! I am Sabahattin, an experienced Android app developer with a passion for learning and creating things. Currently I'm living and studying in Istanbul. I met computer at high school since then I have been constantly learning and expanding my knowledge in the field. I studied about computer in high school for three years and I am currently a fourth-year student pursuing a Bachelor's degree in Computer Engineering. Over time, I've worked on various projects of small and large-scale, and one of my Android apps has reached over 2 million users. I have four active apps on the Google Play Store, and their links will be provided in my resume. I have been working on the Android platform for over 4 years and have extensive knowledge of object-oriented Java programming, which I have utilized in all of my projects. As a part of mobile app developing, I know how to use server side technologies, tools and languages(NodeJS, Rest API etc.). I also have deep knowledge of App store optimisation(ASO) which is quite important for reaching users. I believe that I have a natural talent for connecting with people and creating a sense of camaraderie, making me a strong asset in any team or social setting. I can speak, read and write English fluent. I am confident that my skills and expertise in mobile platforms can provide valuable contributions to the growth and success of companies and startups in this field. Best regards.
